Utrecht, Netherlands

EU citizen (Italian), no sponsorship needed

Open to remote (EU / CET), hybrid in Kraków, permanent or B2B

Skills

Frontend
Angular (AngularJS to v22), TypeScript, React, Vue, Ionic, RxJS, HTML5, CSS3 / SCSS, Tailwind

AI & agents
Microsoft Agent Framework, AG-UI, GitHub Copilot workflows & harness, Claude Skills

State
NgRx, Signals, Signal Store

Architecture
Nx / monorepos, Standalone components, Micro-frontends, Design systems, Storybook

Testing
Jest, Jasmine / Karma, Cypress, Playwright

Quality & delivery
CI/CD (GitHub Actions), Core Web Vitals, Accessibility (WCAG), Git, Scrum

Mobile
Capacitor, Swift / SwiftUI (iOS)

Cloud & backend
Firebase (Functions, Firestore, Auth), Node.js, Google Cloud, Azure

Languages

Spanish (native)

English (bilingual)

German (fluent)

Italian (fluent)

Education

Computer Engineering (coursework)
Universidad Nacional de La Plata

Certifications

CPSA-F, Certified Professional for Software Architecture

Interests

PADI Diving Instructor (certified, Koh Tao)

Martín Campagnoli

Senior Frontend Developer · Angular · AI agents

Senior frontend developer with 13 years building scalable single-page applications in Angular and TypeScript, hands-on with every major version from AngularJS to v22. I lead large-scale migrations, own design systems, and manage complex state with NgRx Signals and Signal Store. In 2026 I moved into **agentic AI**: building agent-powered UIs with Microsoft Agent Framework and AG-UI, and automating delivery with Copilot workflows and Claude Skills, always with human review built in. Experienced technical lead in banking and e-commerce, comfortable working fully remote across time zones.

Work experience

Senior Frontend Developer
Jan 2026 to Present

Dialog (Visma) · Utrecht, Netherlands

- Led the migration of a large-scale Angular application from v18 to v22, modernising the architecture with standalone components and Signals, and moving state management from Akita to NgRx Signal Store, while the product kept shipping.
- Built agent-powered features with **Microsoft Agent Framework** and **AG-UI**, streaming agent state and actions into the Angular UI with human-in-the-loop approval.
- Introduced **GitHub Copilot workflows** and a Copilot harness, plus **Claude Skills** encoding team standards, to automate tests, refactors and upgrades inside the normal PR and review process.
- Technical owner of the design system: a reusable, accessible (WCAG) component library used across teams; mentored developers through code reviews and engineering standards.

Senior Frontend Developer
Oct 2023 to Dec 2025

Sogeti for Rabobank · Utrecht, Netherlands

- Replatformed a business-lending application from React to Angular v20 as external senior frontend developer.
- Integrated RESTful APIs with RxJS for a complex, data-heavy lending workflow.
- Partnered with UX on the loan-application journey; drove unit, integration and end-to-end testing.

Lead / Senior Frontend Developer
Oct 2021 to Sep 2023

Incentro · Rotterdam, Netherlands

- Technical lead across teams, delivering multiple Angular e-commerce single-page applications.
- Improved performance and Core Web Vitals through refactoring and lazy loading, cutting load times.
- Coached developers and integrated REST APIs in close collaboration with back-end teams.

Senior Frontend Developer
Jan 2021 to Sep 2021

Alphin · Berlin, Germany

- Built responsive Angular (v12) applications with lead and mentoring responsibilities; worked with the Head of IT to improve the development process and code quality.

Earlier experience

Canto · Berlin, Germany (2017 to 2020) and **Accenture** · Argentina (2013 to 2017): seven years with AngularJS on enterprise projects, including leading a migration to Angular v7. Reported directly to the CTO, introduced linting and Jasmine / Karma testing, and delivered courses on AngularJS and testing across the organisation.

Side project: Frey Dive (iOS, Android, web) · freydive.app

- Diving app I build and run end-to-end in a monorepo: Angular + Ionic web app with NgRx Signals, wrapped with Capacitor for Android; native **SwiftUI** iOS app; React landing site; Node/TypeScript backend on Firebase Cloud Functions.
- Production **AI assistant**: LLM agent with vision, streaming replies to the app over **AG-UI**.
- Subscriptions (RevenueCat), push, analytics (PostHog), CI/CD with GitHub Actions; tested with Jest, Playwright, Firestore rules tests and web-to-Swift parity fixtures.
