Born in Argentina, also EU citizen

Skills

Frontend
Angular (AngularJS to v22), TypeScript, JavaScript (ES6+), RxJS, HTML5, CSS3 / SCSS

State
NgRx, Signals, Signal Store

Architecture
Nx / monorepos, Standalone components, Micro-frontends, Design systems, Storybook

Testing
Jest, Jasmine / Karma, Cypress, Playwright

Quality & delivery
CI/CD, Core Web Vitals, Accessibility (WCAG), Git, Scrum

Cloud
Firebase, Azure

Languages

Spanish (native)

English (bilingual)

Italian (fluent)

German (fluent)

Education

Computer Engineering (coursework)
Universidad Nacional de La Plata

Certifications

CPSA-F, Certified Professional for Software Architecture

Interests

PADI Diving Instructor (certified, Koh Tao)

Martín Campagnoli

Senior Frontend Developer

Senior frontend developer with 10+ years building scalable, responsive single-page applications in Angular and TypeScript, hands-on with every major version from AngularJS to v22. I lead large-scale migrations, own design systems and component architecture, and manage complex state with NgRx Signals and Signal Store. Strong on clean, accessible, well-tested code (unit and end-to-end), performance optimisation, RESTful API integration and CI/CD. Comfortable as a technical lead: setting engineering standards, running code reviews, and mentoring developers.

Work experience

Senior Frontend Developer

Jan 2026 to Present

Dialog BV, Utrecht

- Leading the ongoing migration of a large-scale Angular application from v18 to the latest (currently on v20, moving to v21 and then v22), modernising the architecture with standalone components and Angular Signals while keeping the product shipping.
- Technical owner of the design system, building a reusable, accessible (WCAG) component library that standardises the UI and speeds up delivery across teams.
- Delivering new features, refactoring legacy code to improve performance and maintainability, and mentoring developers through code reviews and engineering standards.

Senior Frontend Developer

Oct 2023 to Dec 2025

Sogeti (client: Rabobank), Utrecht

- Part of the team that replatformed a business-lending application from React to the latest Angular (v20), contributing as an external senior frontend developer.
- Architected application state with NgRx Signals and Signal Store for a complex, data-heavy lending workflow and integrated RESTful APIs with RxJS.
- Partnered with UX on the loan-application journey and drove unit, integration and end-to-end testing, mentoring developers through code reviews.

Lead / Senior Frontend Developer

Oct 2021 to Sep 2023

Incentro, Rotterdam

- Delivered multiple Angular e-commerce single-page applications as technical lead across teams.
- Improved application performance and Core Web Vitals through refactoring and lazy loading, reducing load times.
- Coached developers across teams and integrated REST APIs in close collaboration with back-end teams.

Senior Frontend Developer

Jan 2021 to Sep 2021

Alphin, Berlin

- Built responsive applications in Angular (v12) while taking on lead and mentoring responsibilities.
- Worked with the Head of IT to improve the development process and ran code reviews to maintain high code quality.

Earlier experience

Canto, Berlin (2017 to 2020) and **Accenture, Argentina** (2013 to 2017): seven years working extensively with AngularJS across enterprise and client projects, including leading a migration to Angular v7. Reported directly to the CTO, introduced linting and Jasmine / Karma unit testing, and coached teams and delivered courses on AngularJS and testing across the organisation, all within Scrum delivery.
